

Tomorrow's manufacturing solutions, today

Customer Relationships

built one day at a time

At P&H, we utilize Okuma machine tools. The size and torque capability of our large MC60VAE machining center allows us to do heavy machining of large parts. Our Okuma lathe has also proven itself for reliability. Hartwig Service Engineers have always provided service and advice beyond what we expect. The Hartwig Application Engineers have given us first rate training and instruction in our machining of parts. The combination of our Okuma machine tools and the excellent Service and Application Engineering support provided through Hartwig, Inc. is tough to beat.

Hartwig provides service that we can count on. Our Okuma CNC lathes are equipped with barfeeders and software options for unattended operation. Service is important to us and with Hartwig we get the fast response we need. Hartwig application engineers also provide great training that shortens the learning curve for our new operators and gives our more experienced operators pointers to reduce our cycle times and make better parts. The combination of Hartwig and Okuma give us the complete package, excellent machine tools combined with service and application engineers that are second to none.
