Tomorrow's manufacturing solutions, today

Taking the first steps towards greater productivity

Tulsa, OK.--DGP, Inc. was founded Oct. 13, 1986 by Gary Taylor of Tulsa, OK. Gary's entry into the machining world was born mostly out of necessity. As the owner of a concrete pumping business, Gary found maintaining equipment was a never ending challenge. After buying an engine lathe to facilitate making equipment repairs, DGP, Inc. began to grow into a full fledged job shop. In the early nineties, DGP reluctantly entered the world of CNC machining, taking that first step towards greater productivity.

In 2000, Gary's son, Jay Taylor took charge of running the family business. Jay has since expanded the facility twice and continued adding CNC's. DGP's most recent purchase was an Okuma L370 with the OSP-P200 control. Jay says this is another step the company is taking to increase productivity using the latest technology and is a very important part of future plans for automation integration. Jay and his operators love the control because of the Windows based operating software, as well as the ease of navigation.

"Our partnership with Hartwig, Okuma and Gosiger Automation will continue to grow and be a very important part of our business plan in the future" says Jay Taylor of DGP, Inc.

"Doing business with Hartwig is simple; from the paperwork, installation, training, the entire buying process is well thought out and there are no surprises" says Jay Taylor.

The only surprise for DGP was the L370 was more productive than anticipated. Using the features of the P200 control, Jay was able to study his spindle utilization and discovered an opportunity for improvement. As a result, DGP, Hartwig and Gosiger Automation have partnered on the integration of a Fanuc robot to load/unload the L370.

With the addition of the Fanuc robot the production of the L370 will nearly double. The operator will be able to run other machines while monitoring the L370/Robot system.

"Our partnership with Hartwig, Okuma and Gosiger Automation will continue to grow and be a very important part of our business plan in the future" says Jay Taylor of DGP, Inc.
